AMENDMENTS TO THE CLAIMS:

This listing of claims will replace all prior versions and listings of claims in the abovereferenced application.

Listing of Claims:

1. (Currently Amended) A method of scanning a storage device for viruses, comprising:

determining physical portions of the storage device that have been modified since a previous virus scan using information about the physical portions that is independent of the file structure, file system, and file types; and

scanning at least parts of the physical portions for viruses, wherein scanning is independent of the file structure, file system, and file types.

- 2. (Original) A method, according to claim 1, wherein the physical portions correspond to tracks of the storage device.
- 3. (Original) A method, according to claim 1, wherein the physical portions correspond to sectors of the storage device.
- 4. (Original) A method, according to claim 1, wherein the physical portions correspond to subportions of the storage device.

5. (Original) A method, according to claim 1, wherein determining the physical portions of the storage device that have been modified includes:

creating a table that is indexed according to each of the portions and has entries indicating whether a corresponding one of the portions has been modified, the entries being cleared after a virus scan to indicate that no portions have been modified; and

setting a specific one of the entries in response to a corresponding one of the portions of the storage device being subject to a write operation.

- 6. (Original) A method, according to claim 5, wherein creating the table includes copying an other table provided by the storage device.
- 7. (Original) A method, according to claim 5, wherein creating the table includes using an other table provided by the storage device.
- 8. 21. (Cancelled)
- 22. (Currently Amended) A computer program product for scanning a storage device for viruses, comprising:

means for determining physical portions of the storage device that have been modified since a previous virus scan using information about the physical portions that is independent of the file structure, file system, and file types; and

means for scanning at least parts of the physical portions for viruses, wherein the scanning is independent of the file structure, file system, and file types.

- 23. (Original) A computer program product, according to claim 22, wherein the physical portions correspond to tracks of the storage device.
- 24. (Original) A computer program product, according to claim 22, wherein the physical portions correspond to sectors of the storage device.
- 25. (Original) A computer program product according to claim 22, wherein the physical portions correspond to subportions of the storage device.
- 26. (Original) A computer program product, according to claim 22, wherein means for determining the physical portions of the storage device that have been modified includes:

means for creating a table that is indexed according to each of the portions and has entries indicating whether a corresponding one of the portions has been modified, the entries being cleared after a virus scan to indicate that no portions have been modified; and

means for setting a specific one of the entries in response to a corresponding one of the portions of the storage device being subject to a write operation.

- 27. (Original) A computer program product, according to claim 26, wherein means for creating the table includes means for copying an other table provided by the storage device.
- 28. (Original) A computer program product, according to claim 26, wherein means for creating the table includes means for using an other table provided by the storage device.

29. - 40. (Cancelled)

41. (Currently Amended) An antivirus unit, comprising:

means for coupling to at least one storage device;

means for determining physical portions of the storage device that have been modified since a previous virus scan using information about the physical portions that is independent of the file structure, file system, and file types; and

means for scanning at least parts of the physical portions for viruses, wherein scanning is independent of the file structure, file system, and file types.

- 42. (Original) An antivirus unit, according to claim 41, wherein the physical portions correspond to tracks of the storage device.
- 43. (Original) An antivirus unit, according to claim 41, wherein the physical portions correspond to sectors of the storage device.
- 44. (Original) An antivirus unit, according to claim 41, wherein the physical portions correspond to subportions of the storage device.

45. (Original) An antivirus unit, according to claim 41, further comprising:

a table that is indexed according to each of the portions and has entries indicating whether a corresponding one of the portions has been modified, the entries being cleared after a virus scan to indicate that no portions have been modified; and

means for setting a specific one of the entries in response to a corresponding one of the portions of the storage device being subject to a write operation.

- 46. (Original) An antrivirus scanning unit, according to claim 41, wherein said means for coupling includes means for coupling to only one storage device.
- 47. (Original) An antivirus unit, according to claim 41, wherein said means for coupling includes means for coupling to more than one storage device.
- 48. (Original) An antivirus unit, according to claim 41, further comprising: means for coupling to at least one host.
- 49. (Original) An antivirus unit, according to claim 48, wherein said antivirus unit is interposed between said at least one storage device and said at least one host.
- 50. (Original) An antivirus unit, according to claim 48, wherein said antivirus unit is implemented as a process running on the at least one host.

- 51. (Original) An antivirus unit, according to claim 41, wherein said antivirus unit is implemented using stand alone hardware.
- 52. (Original) An antivirus unit, according to claim 41, wherein at least a portion of the antivirus unit is provided on at least some controllers for the at least one storage device.
- 53. 62. (Cancelled)
